## Doctors management.

(IT 18038088 W.M.C.D.Wijayalath)

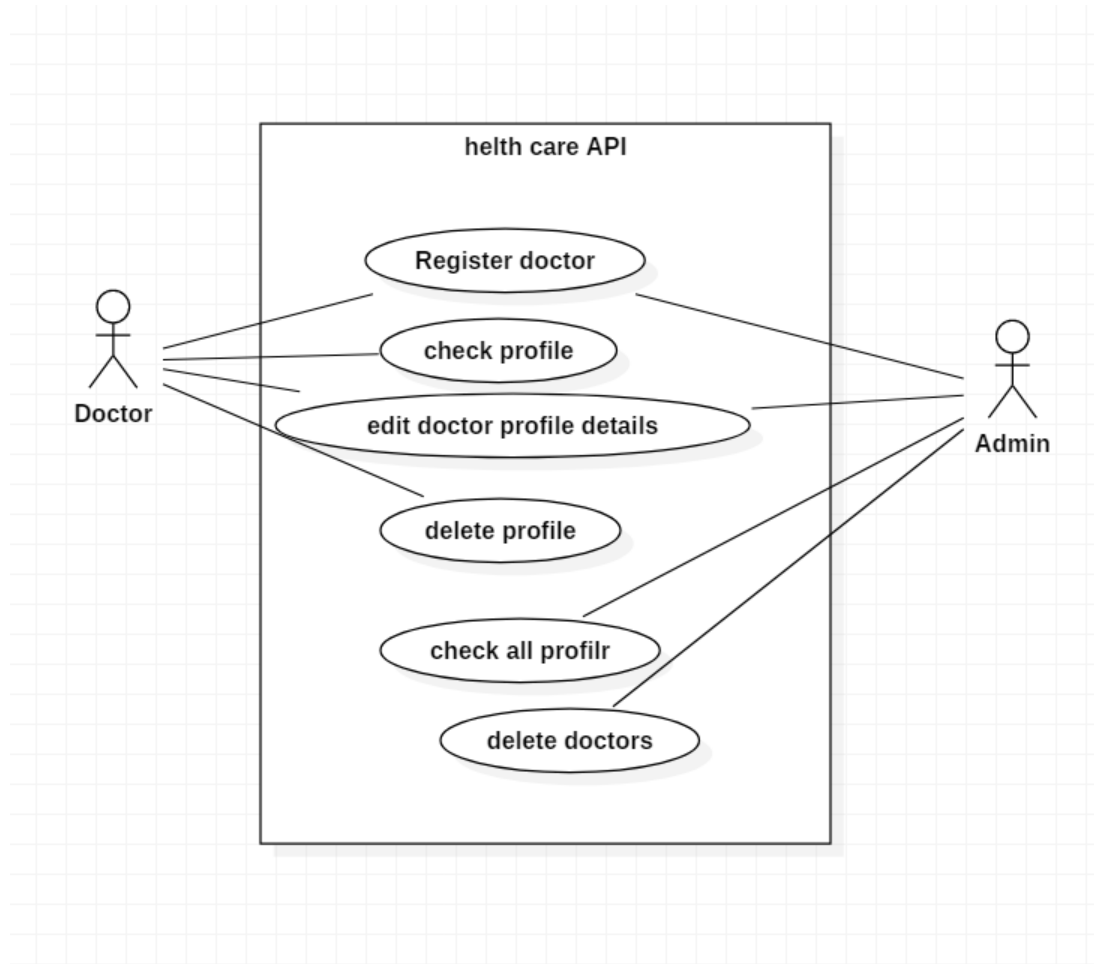

Healthcare is Hospital management system, which provides a platform for the interconnect to doctors and Patients. This platform related to Online appointment and online payment then we start to develop API,so my part is Doctor management, first, we Identified the related service,

Workload:

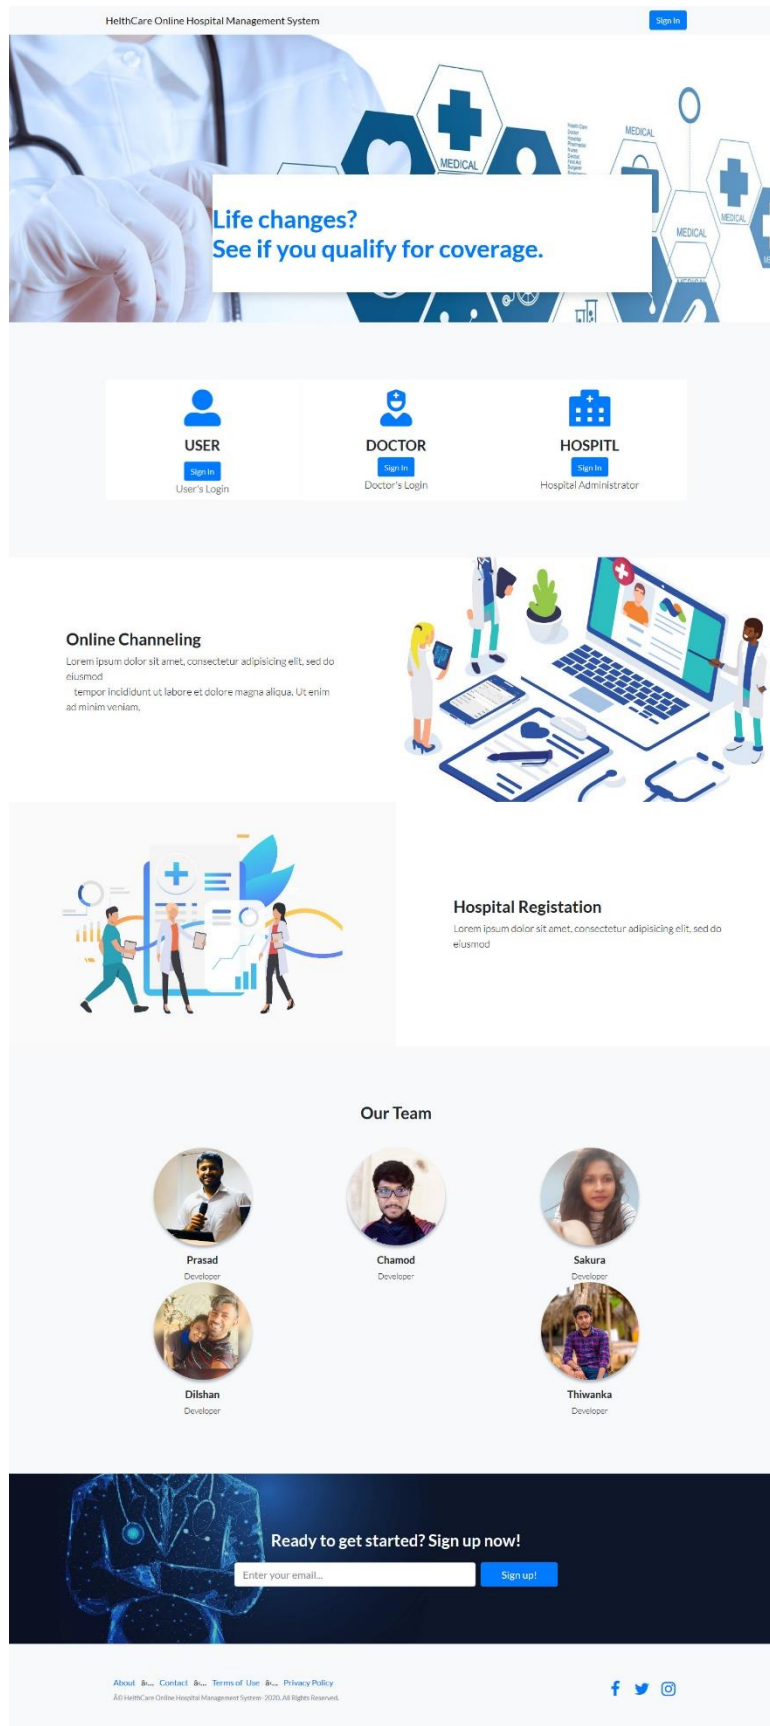

- Admin can be Register Doctors.
- Admin can view all doctors details.
- Admin can modify all doctors details.
- Admin can delete doctors account.
- Doctor can be Register site in an easy way.
- Doctor can view his details .
- Doctor can delete account.

Doctor can register the “Health care” system using the Doctor registration, This registration part works using the POST method. It communicates with other RESTful services. Doctor can Login the his account and he can edit his profile details ,the system **administrator also can Register ,Update and Delete Doctor accounts**. We use to GET and PUT method run this serves. Administrator and Doctor can Delete the doctor account, This part works using the Delete method.

## User case

password : "admin"

## Admin Panel

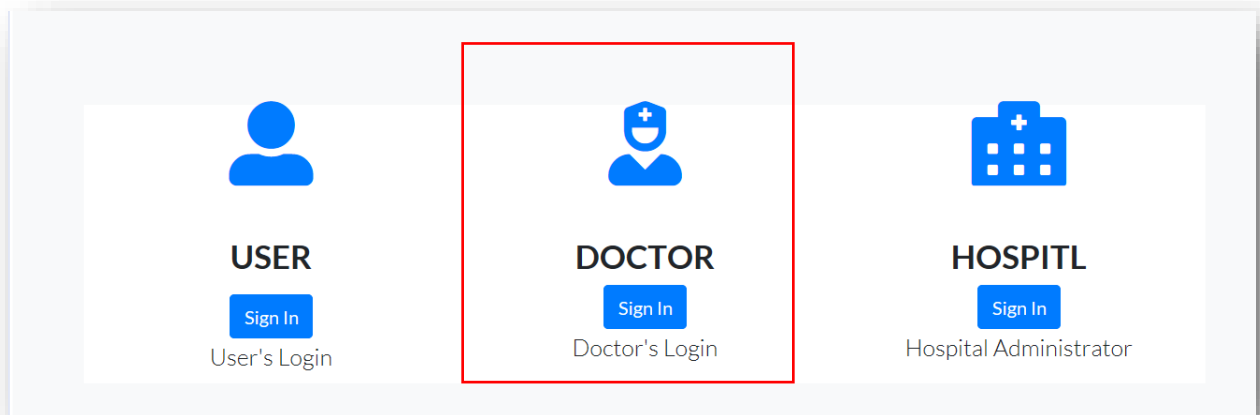

## Doctor Management

The screenshot shows the 'Doctor Management' interface. At the top, there is a breadcrumb trail: 'Admin panel / Doctor management / Logout'. The main heading is 'Doctor Management'. Below the heading, there is a form for adding a doctor with the following fields: Name, Tel, Specialization, Hospital, Email, and password. A 'Save' button is located below the form. A green message box indicates 'Successfully deleted.' Below the form, there is a table of existing doctors.

ID	Name	Tel	Specialization	Hospital	Email	password	Update	Remove
43	chamod+dilshan	715572345	Endocrinologists	kurunegala	chamod%40gmail.com	ghfh	<button>Update</button>	<button>Remove</button>
45	nalaka	72121332	Anesthesiologists	colombo	doubled98.my@gmail.com	213	<button>Update</button>	<button>Remove</button>
